# QHIN Conformance Testing Process: Security Test Cases

For Candidate QHIN Conformance Testing

Version History

Version	Description of Change	Version Date
1.0	Initial Publication	September 9, 2022
1.0.1	Removed 14 Test Cases that did not align with the QHIN Technical Framework (QTF) requirements; updated language clarifying SAML assertion testing details and data load set/test patient requirements; and aligned language with the TEFCA Standard Operating Procedures (SOPs).	December 6, 2022
1.0.2	Remove one Test Case related to timestamp signature.	February 6, 2023
1.0.3	Updated Title to include “For Candidate QHIN Conformance Testing” only.	May 31, 2023
1.1	Update for QHIN 1.1 (updated test patient demographics)	March 18, 2024
2.0	Updated test steps to clarify expected system behavior.	July 3, 2025

## 1 QHIN CONFORMANCE TESTING PROCESS OVERVIEW

The scope of the Recognized Coordinating Entity (RCE)/QHIN Testing Process is limited to the Qualified Health Information Network (QHIN) Technical Framework (QTF) Version 2.0, the information outlined in the Common Agreement, and related QHIN Testing Process document(s).

Changes to the QHIN Testing Process documents may be updated in accordance with the QTF, which may be updated in accordance with changes to industry standards and specifications.

The scope of the QHIN Testing Process document(s) supports the following:

- Prospective QHINs in the Conformance Testing Process;
- QHINs who wish to test new technology or retest as a condition of continued participation in the Common Agreement; and
- Vendors who wish to have their product(s) validated as QHIN compliant. The Conformance Testing Process verifies that a system both complies with the QTF specifications and has the ability to interoperate with other QHINs.

The abbreviation of System Under Test (SUT) will be used to describe the role of the testing organization in the following test cases. The summary of security test cases can be found below:

*Table 1: Security Test Summary*

SUT	Description	Specifications	Summary of Test Cases	Test Method
QHIN	Transmitting clinical documentation to support treatment of an individual, care coordination, or transitions of care	QHIN Technical Framework (QTF) Version 2.0	20 required security tests	Run tests against the Sequoia Interoperability Testing Platform (ITP)  Results validated by the Sequoia Project

These test cases are currently in effect and are required for organizations wishing to complete Pre-Production. These materials reflect the following:

- QHIN Testing Overview - A broad overview of the process, applications, and documentation for the Conformance Testing Process. List of all QHIN test cases, documentation, conformity assessment checklists, and a description of content tests for the Conformance Testing Process.
- [Test Data Load Set](#) – Required data and associated document files to execute the test cases within the Sequoia Interoperability Testing Platform (ITP) including patient demographics, sample documents, as well as the mapping of the documents to the individuals. The demographic data must be loaded into the SUT exactly as prescribed in the patients.csv spreadsheet and all attributes must be loaded (unless the attribute is an optional element and it is not supported by the SUT). CCD files and other clinical data included in the Test Data Load Set are provided as examples.

## 2 SECURITY TEST CASE LIST

The following table lists the security tests that must be completed for the Conformance Testing Process. The following list of 20 test cases are required to pass the Security component of testing for Pre-Production Testing.

The security test cases currently require no specific preloading of data and/or associated document files as only SOAP security, XML security, and SAML assertion elements are in scope.

**TABLE 2: SECURITY TEST CASE LIST**

#	TEST CASE ID	FUNCTIONAL AREA	PURPOSE/ DESCRIPTION
1	<a href="#">TC-MAPD-R-0003.000</a>	SOAP security	Handle missing wsse:Security element
2	<a href="#">TC-MAPD-R-0003.201</a>	WS-Addressing	Handle missing MessageID element
3	<a href="#">TC-MAPD-R-0003.301</a>	XML Signature	Handle missing Assertion signature element
4	<a href="#">TC-MAPD-R-0003.302</a>	XML Signature	Handle invalid Assertion signature
5	<a href="#">TC-MAPD-R-0003.326</a>	XML Signature	Handle Missing KeyInfo in Assertion signature
6	<a href="#">TC-MAPD-R-0003.401</a>	SAML Assertion	Handle missing Assertion element
7	<a href="#">TC:MAPD-R-0003.402</a>	SAML Assertion	Handle an invalid Version in the Assertion
8	<a href="#">TC:MAPD-R-0003.403</a>	SAML Assertion	Handle missing Version in Assertion element
9	<a href="#">TC:MAPD-R-0003.407</a>	SAML Assertion	Handle invalid IssueInstant in Assertion element
10	<a href="#">TC:MAPD-R-0003.408</a>	SAML Assertion	Handle IssueInstant much later than Message Timestamp
11	<a href="#">TC:MAPD-R-0003.409</a>	SAML Assertion	Handle missing Issuer in Assertion element
12	<a href="#">TC-MAPD-R-0003.410</a>	SAML Assertion	Handle Missing Issuer Format in Assertion
13	<a href="#">TC-MAPD-R-0003.411</a>	SAML Assertion	Handle Invalid Issuer Email Name ID in Assertion
14	<a href="#">TC-MAPD-R-0003.412</a>	SAML Assertion	Handle Invalid Issuer X.509 Name ID in Assertion

#	TEST CASE ID	FUNCTIONAL AREA	PURPOSE/ DESCRIPTION
15	<a href="#">TC-MAPD-R-0003.413</a>	SAML Assertion	Handle Invalid Issuer Windows Name ID in Assertion
16	<a href="#">TC-MAPD-R-0003.420</a>	SAML Assertion	Handle Missing Subject element in Assertion
17	<a href="#">TC-MAPD-R-0003.421</a>	SAML Assertion	Handle Missing Subject Name ID in Assertion
18	<a href="#">TC-MAPD-R-0003.422</a>	SAML Assertion	Handle Invalid Subject Name ID in Assertion
19	<a href="#">TC-MAPD-R-0003.423</a>	SAML Assertion	Handle Missing Subject Confirmation in Assertion
20	<a href="#">TC-MAPD-R-0003.424</a>	SAML Assertion	Handle Missing Subject Confirmation Method in Assertion

### 3 TESTS FOR INITIATING QHIN CANDIDATE

The RCE/QHIN Testing Process for Qualified Health Information Network (QHIN) Technical Framework (QTF) Version 2.0 Specification does not currently specify negative tests for Initiating QHIN candidates.

### 4 TESTS FOR RESPONDING QHIN CANDIDATE

#### TC: MAPD-R-0003.000 Handle missing wsse:Security element

<b>Test Case ID:</b>	<b>TC: MAPD-R-0003.000</b>
Title:	Handle missing wsse:Security element
SUT Role:	Responding Gateway
Flow:	Error
Optionality:	Required

#### Purpose/Description

Testing Tool sends a simple Patient Discovery (PD) Request to the System with a missing wsse:Security element.

#### Preconditions

Data Load Set: N/A

Test Case Patient Association: N/A

Test Steps

1. The Testing Tool sends a synchronous Patient Discovery Request to the System with the SOAP header missing the Security element.
2. The System returns a SOAP fault to the Testing Tool with text describing the relevant error.
  - a. If a local security policy to conceal fault information is in place, a normal response, but without performing the requested action may be returned instead. For example, a normal response is returned with no matching patients found. This must be consistent across all test cases.

**TC:MAPD-R-0003.201 Handle missing MessageID element**

Test Case ID:	TC: MAPD-R-0003.201
Title:	Handle missing MessageID element
SUT Role:	Responding Gateway
Flow:	Error

<b>Test Case ID:</b>	<b>TC: MAPD-R-0003.201</b>
Optionality:	Required

**Purpose/Description**

Testing Tool sends a simple Patient Discovery (PD) Request to the System with a missing MessageID element.

**Preconditions**

Data Load Set: N/A

Test Case Patient Association: N/A

**Test Steps**

1. The Testing Tool sends a synchronous Patient Discovery Request to the System with the SOAP header missing MessageID.
2. The System returns a SOAP fault to the Testing Tool with text describing the relevant error.
  - a. If a local security policy to conceal fault information is in place, a normal response, but without performing the requested action may be returned instead. For example, a normal response is returned with no matching patients found. This must be consistent across all test cases.

**TC:MAPD-R-0003.301 Handle missing assertion signature element**

<b>Test Case ID:</b>	<b>TC: MAPD-R-0003.301</b>
Title:	Handle missing assertion signature element
SUT Role:	Responding Gateway
Flow:	Error
Optionality:	Required

**Purpose/Description**

Testing Tool sends a simple Patient Discovery (PD) Request to the System with a missing Security/Assertion/Signature element.

**Preconditions**

Data Load Set: N/A

Test Case Patient Association: N/A

**Test Steps**

1. The Testing Tool sends a synchronous Patient Discovery Request to the System with the SAML assertion missing Security/Assertion/Signature.
2. The System returns a SOAP fault to the Testing Tool with text describing the relevant error.
  - a. If a local security policy to conceal fault information is in place, a normal response, but without performing the requested action may be returned instead. For example, a normal response is returned with no matching patients found. This must be consistent across all test cases.

**TC:MAPD-R-0003.407 Handle invalid IssueInstant in Assertion element**

<b>Test Case ID:</b>	<b>TC: MAPD-R-0003.407</b>
Title:	Handle invalid IssueInstant in Assertion
SUT Role:	Responding Gateway
Flow:	Error
Optionality:	Required

**Purpose/Description**

Testing Tool sends a simple Patient Discovery (PD) Request to the System with an invalid IssueInstant in the Assertion element.

**Preconditions**

Data Load Set: N/A

Test Case Patient Association: N/A

**Test Steps**

1. The Testing Tool sends a synchronous Patient Discovery Request to the System with the SOAP header element Security/Assertion/@IssueInstant is not a valid xs:DateTime as described in <https://www.w3.org/TR/xmlschema-2/>
2. The System returns a SOAP fault to the Testing Tool with text describing the relevant error.
  - a. If a local security policy to conceal fault information is in place, a normal response, but without performing the requested action may be returned instead. For example, a normal response is returned with no matching patients found. This must be consistent across all test cases.

Change History

Date	Changes
April 1, 2022	Initial Draft Version
December 6, 2022	Updated language clarifying SAML assertion details and data load set/test patient requirements.
July 3, 2025	Updated test steps to clarify expected system behavior.

**TC: MAPD-R-0003.424 Handle missing Subject Confirmation Method in Assertion**

<b>Test Case ID:</b>	<b>TC: MAPD-R-0003.424</b>
<b>Title:</b>	Handle missing Subject Confirmation Method in Assertion
<b>SUT Role:</b>	Responding Gateway
<b>Flow:</b>	Error
<b>Optionality:</b>	Required

**Purpose/Description**

Testing Tool sends a simple Patient Discovery (PD) Request to the System with a missing Subject Confirmation Method element in Assertion.

**Preconditions**

Data Load Set: N/A

Test Case Patient Association: N/A

**Test Steps**

1. The Testing Tool sends a synchronous Patient Discovery Request to the System with the SOAP header element Security/Assertion/Subject/SubjectConfirmation/@Method is missing
2. The System returns a SOAP fault to the Testing Tool with text describing the relevant error.
  - a. If a local security policy to conceal fault information is in place, a normal response, but without performing the requested action may be returned instead. For example, a normal response is returned with no matching patients found. This must be consistent across all test cases.
